Digital Prescribing

JellyPx is also a secure digital prescribing platform so that you can create your own branded private prescriptions using either the NHS medicine database or alternatively via either SignatureRx for patient prescription collection or CloudRx for remote dispensing. Our managed repeat system will free up your time by allowing patients to request repeats and pay online.

Increased Productivity

Patients are managed in a timely and effective manner when the team know which part of the patient visit is their responsibility. Staff members can quickly capture patient details and symptoms before the patient consultation with the pharmacist. With a prescription generated during the consultation, dispensing staff can prepare the medication during the visit and auto-generated GP letters mean the patient can leave with everything they need. There is the ability to detect any potential for cross selling and spot early on any new patient trends that emerge.

Grow Revenue

JellyPX helps you offer clinical services such as NMS, travel, vaccination and minor illness clinics, in a time efficient manner increasing the value to your pharmacy.

It can store the patient's full medication history and your ongoing medical notes and these can be retrieved with just a few clicks. Patients can complete a "new patient" form in advance of their first visit or on the day using their phone or a tablet.

By streamlining your consultation process and reducing the time needed to complete all the paperwork and GP letters, you create more time to see additional patients.

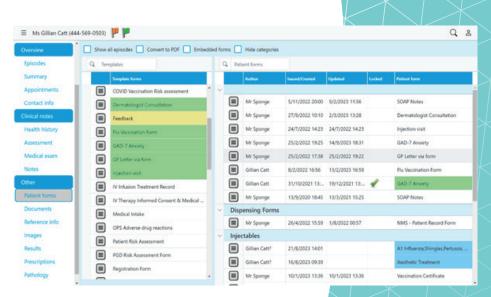

Multi Branch Pharmacies

JellyPx supports multi-branch pharmacy chains to allow you to make better use of the skills of staff across all the branches. The information captured for a patient at one branch can be analysed or actioned by a suitably qualified member of staff at another branch.

Video Consultations

Remote consultations can be convenient and timely and with reduced need for face-to-face contact it can offer increased appointment flexibility.

Remote consultations also increases your reach of patients and your commercial footfall. Some patients may feel more relaxed at home, but

the decision to offer a video consultation may also be used as a method of triage to assess if a face-to-face consultation will be necessary as a follow-up.

Pathology

Jelly Software has partnered with Viva Health laboratories to provide Pathology, Nutritional & Environmental testing. They have 170+ phlebotomy locations in the UK. You can offer patients tests such as well man/woman, diabetes, cholesterol, allergies, vitamins and more - all supported by comprehensive reporting delivered directly back into Jelly.

Form Library

JellyPx comes with a comprehensive form library created by leading pharmacy professionals. These forms will help you confidently offer more revenue generating services by ensuring that you are asking the right questions and recording the correct information to ultimately help you pass any inspections.

Forms can be completed by you with the patient, by the patient themselves on a tablet, or even emailed to them in advance of their visit to complete at home. Going digital will streamline your business

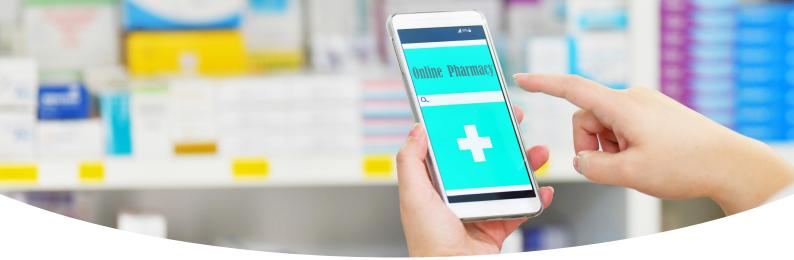

Testimonials

"Jelly has improved my private practice substantially. I've now gone paperless with my consent forms and was able to tailor them to my individual services. My staff love the ease of the booking system and it has helped reduce missed appointments with its automatic text reminders making our services more profitable."

Bharvi Patel, Apple Tree Pharmacy

"Jelly helped me grow my business without increasing the admin or the stress levels of my team. I was even able to save two hours a week as Jelly now generated the follow up GP letters."

Sunil Kochhar, Regent Pharmacies Limited

Go Paperless

Accessed via any PC or mobile device, all patient notes, letters and communications are stored securely at our ISO 27001 accredited data centre in the UK. With records available at the push of a button for inspections, it is simple to prove you are exceeding standards and providing your patients with the very best levels of service.

Online Bookings

If you would like your patients to have the convenience of booking online but the security of knowing that you are in control of your diary then Jelly has the perfect solution. The whole booking system can also be integrated into your existing website. You can offer patients their own portal where they can view or make bookings, pay invoices, see any forms they have completed or send you a message.
